Project 5:- Maven Selenium Project – MyMavenSeleniumApp03

Objective

This project focuses on using Selenium WebDriver within a Maven setup to automate the login process on the SauceDemo website, entering valid credentials and verifying successful authentication.

Sample Website Used for Automation

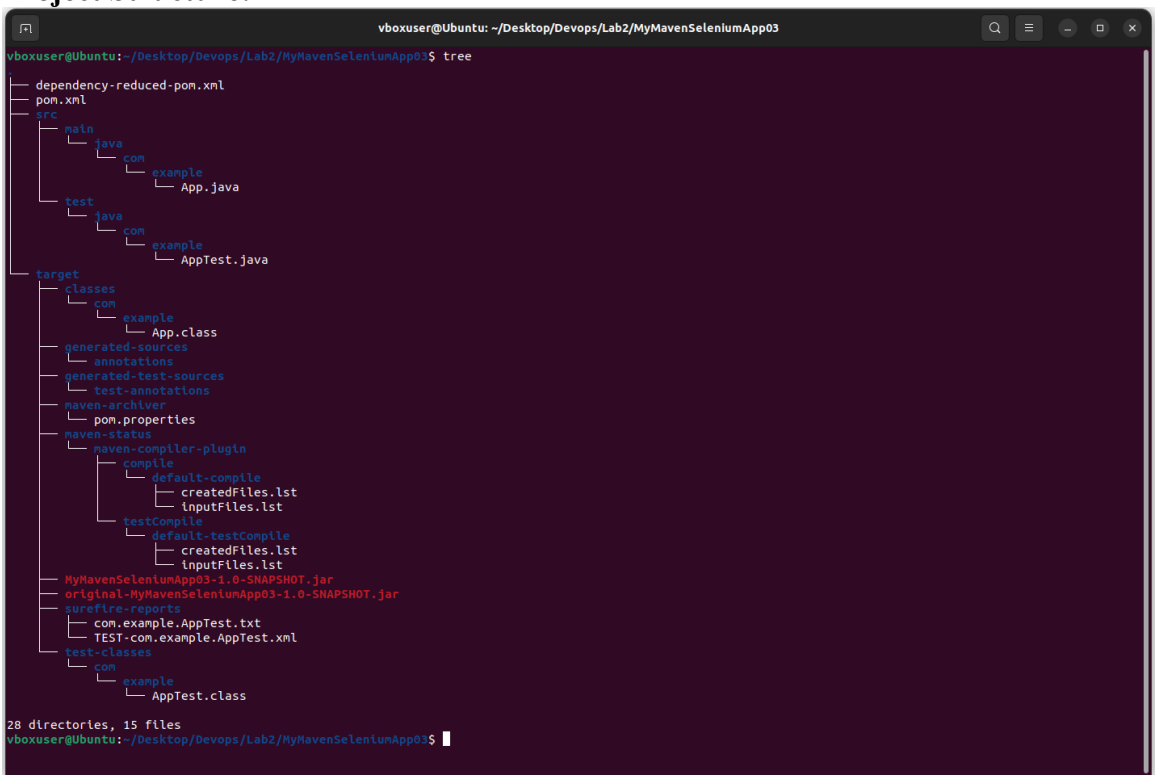
https://www.saucedemo.com/

Step 1: Create a Maven Project Using Terminal

Enter the command below in your terminal to create the Maven project:

```
mvn archetype:generate -DgroupId=com.example -DartifactId=MyMavenSeleniumApp03
  -DarchetypeArtifactId=maven-archetype-quickstart -DinteractiveMode=false
```

Project Structure:



Step 2: Add Selenium Dependency in pom.xml

Open pom.xml and place the following dependency inside the <dependencies> block:

```
<dependency>
  <groupId>org.seleniumhq.selenium</groupId>
  <artifactId>selenium-java</artifactId>
  <version>4.41.0</version>
</dependency>
```

Step 3: Inspect Elements in the Website

Open DevTools in the browser and inspect the login form elements. The attributes user-name, password, and login-button are used to uniquely identify each field and are referenced in the script.

Step 4: Create App.java

Create or open App.java at src/main/java/com/example/ and enter the code shown below:

```
package com.example;

import org.openqa.selenium.By;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.chrome.ChromeDriver;

public class App {
  public static void main(String[] args) throws InterruptedException {
    WebDriver driver = new ChromeDriver();
    driver.get("https://www.saucedemo.com/");
    Thread.sleep(3000);

    driver.findElement(By.id("user-name")).sendKeys("standard_user");
    Thread.sleep(3000);
    driver.findElement(By.id("password")).sendKeys("secret_sauce");

    Thread.sleep(3000);
    driver.findElement(By.id("login-button")).click();
    Thread.sleep(3000);

    driver.quit();
  }
}
```

Step 5: Build the Maven Project

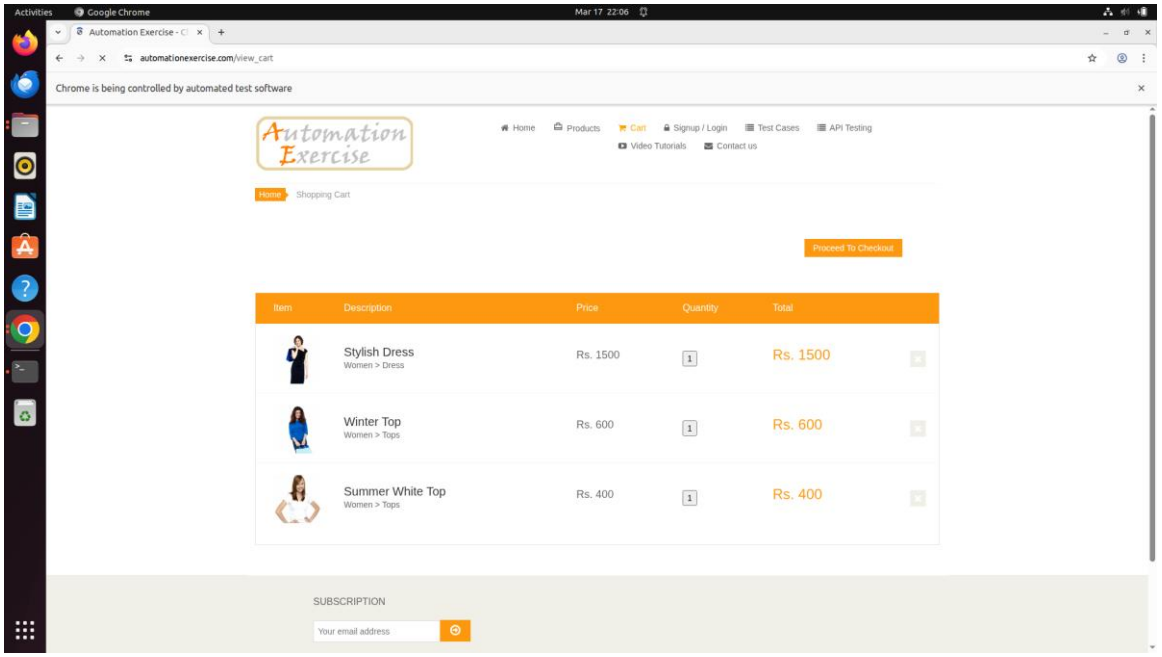
```
mvn clean compile
```

Step 6: Run the Application

```
mvn exec:java
```

Output

All three products (IDs 4, 5, and 6) are added to the cart and the cart page correctly reflects the selections.



Conclusion

This project shows that Selenium can reliably handle real-world e-commerce flows like product selection and cart management. The entire process ran automatically from start to finish.
